ESA614: Computational Astrophysics

Assignment # 3

Name: Abraham Mathews

ID: SC22M077

Program: MS Astronomy and Astrophysics

Attached file *blazar_S0716.dat* contains the photometric observations of a blazar S50716+714.‡

Choose finely sampled block of data in timescale of a few hours around 5th Jan 2016 and 29th Jan 2016. Interpolate the magnitude vs time data ~~with both Lagrange and~~§ Cubic Spline (use *scipy.interpolate* for spline) interpolation.

~~Choose the more appropriate interpolation method out of these two,~~ interpolate V, R, and I light curves. Obtain *V*-R and *R*-*I* colors.

(i) Separately plot *V*-*R* and *R*-*I* colors vs R magnitude and see (visually) if there is correlation between color variation and flaring.
(ii) Plot a color-color diagram (*V*-*R* vs *R*-*I*) of the blazar.
